

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A wireless computing apparatus having:

a processor; and

a memory comprising computer executable instructions which, upon execution are operative to cause the wireless computing apparatus to:

request available updates;

receive, in response to said request, an update catalog of available updates, the available updates comprising available discretionary updates;

receive, with the update catalog, mandatory updates;

install the received mandatory updates;

determine that a first group of the available discretionary updates ~~is relevant to~~ has not already been installed on the wireless computing apparatus, and is applicable to the software currently installed on the wireless computing apparatus, ~~and wherein one or more of the available discretionary updates of the first group belongs to a first update category and another one or more of the available discretionary updates of the first group belongs to a second update category different from the first update category;~~

~~determine that~~ a second group of the available discretionary updates is ~~irrelevant~~ has already been installed on the wireless computing apparatus, or is inapplicable to the software currently installed on the wireless computing apparatus; and

based on results of the determinations, depict representations of the available discretionary updates of the first group, but not of the second group, in a selectable manner on a display of the wireless computing apparatus; and

automatically select the one or more depicted available discretionary updates belonging to the first update category, but not the one or more depicted available discretionary updates belonging to the second update category, to enable user control over installation selection of at least one of the relevant one or more depicted available discretionary updates belonging to the second update category.

2. (Currently Amended) The wireless computing apparatus of Claim 1, the computer executable instructions further operative, upon execution, to cause the wireless computing apparatus to ~~select a desired discretionary update from said first group; and to obtain said desired the one or more depicted available~~ discretionary updates belonging to the first update category.

3. (Currently Amended) The wireless computing apparatus of Claim 2, the computer executable instructions further operative, upon execution, to cause the wireless computing apparatus to install said obtained discretionary updates belonging to the first update category.

4. (Previously Presented) The wireless computing apparatus of Claim 1, wherein said second group comprises an available discretionary update currently installed on the wireless computing apparatus.

5. (Previously Presented) The wireless computing apparatus of Claim 1, wherein said second group comprises an available discretionary update inapplicable to software currently installed on the wireless computing apparatus.

6.-9. (Cancelled)

10. (Currently Amended) A method of updating data on a wireless mobile device, the method comprising:

requesting available updates by the wireless mobile device;

receiving by the wireless mobile device, in response to said requesting, an update catalog ~~for of~~ available updates, said available updates catalog comprising available discretionary updates;

receiving by the wireless mobile device, with the update catalog, a mandatory update;
installing by the wireless mobile device the received mandatory update;

determining by the wireless mobile device that a first group of the discretionary updates is not currently installed on the wireless mobile device, and is applicable to the software currently installed on[[,]] the wireless mobile device, wherein one or more of the available discretionary updates of the first group belongs to a first update category and another one or more of the available discretionary updates of the first group belongs to a second update category different from the first update category;and

determining by the wireless mobile device that a second group of the available discretionary updates is currently installed on, or is inapplicable to the software currently installed on, the wireless mobile device; and

based on results of the determinations, depicting by the wireless mobile device the available discretionary updates of the first group, but not of the second group, in a selectable manner on a display of the wireless mobile device; and

automatically selecting the one or more depicted available discretionary updates of the first update category, but not the one or more depicted available discretionary updates of the second update category, to enable user control-over-installationselection of at least one of the relevant one or more depicted available discretionary updates of the second update category.

11. (Previously Presented) The method of Claim 10, wherein said determining comprises comparing, by the wireless mobile device, the update catalog to the software currently installed on the wireless mobile device, wherein the software is at least one of an operating system or an application.

12. (Currently Amended) The method of Claim 10, further comprising selecting, by the wireless mobile device, a desired discretionary update from said first group; and obtaining, by the wireless mobile device, said one or more depicted available discretionary updates of the first update category.

13.-29. (Cancelled)
